NEW BASIS OF COMPILING TRADE STATISTICS

Trade can conveniently be recorded at two points. One is the national frontier, the point at which goods enter into or pass beyond the control of the national government. The other is the "customs frontier", the point at which imports leave customs supervision or exports enter it. Records taken at the national boundary are known as "General Trade" statistics; records taken at the customs boundary as "Special Trade" statistics. Statistics of the same trade compiled in these two ways can differ in both magnitude and timing.

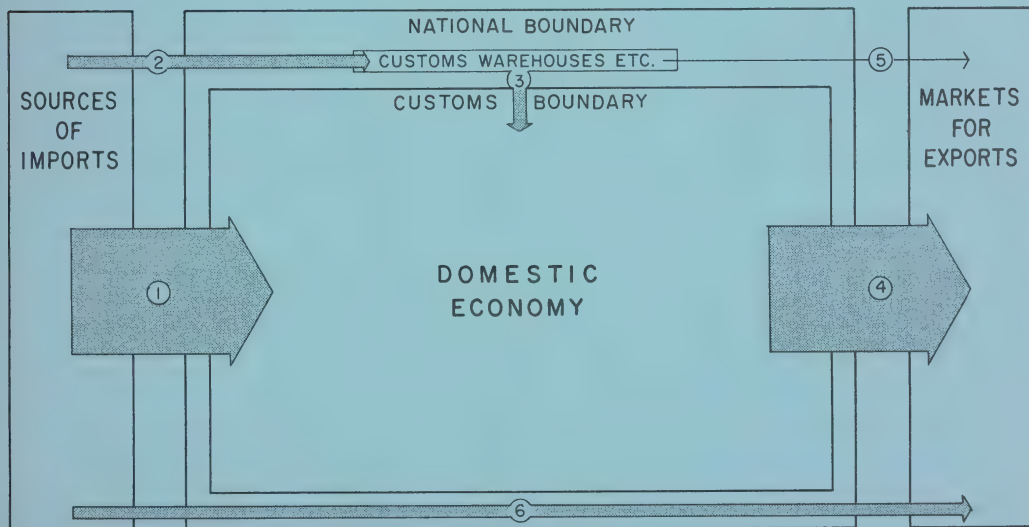

The chart below illustrates the principal flows involved in these two systems of compiling trade statistics. The arrows in the chart indicate the following movements of goods:

- (1) Most imports cross the national boundary and are immediately (or within a few days) cleared through customs for domestic use.
- (2) A growing proportion of imports crosses the national boundary and is then stored in a customs warehouse under customs supervision, rather than being cleared for domestic use. Some countries also have "free ports" and bonded processing establishments which are analogous to customs warehouses, but these are not now used in Canada.
- (3) Most of the goods stored in customs warehouses are eventually cleared through customs for domestic use, but only after some weeks or months have passed.
- (4) Most exports leave the domestic economy and immediately pass beyond the national boundary.
- (5) A small proportion of exports consists of goods entered into customs warehouses and later re-exported without ever having been cleared for domestic use.
- (6) Direct transit trade consists of goods which enter the national territory with the purpose of passing to some other country. These goods remain under customs supervision as long as they are within the national boundary. There are no statistical records of this movement.

Until 1964, Canada's trade statistics were of the "Special Trade" type. Imports therefore included the movements indicated by arrows 1 and 3, exports the movement indicated by arrow 4. As of January 1, 1964, Canada's trade statistics are being compiled on the "General Trade" basis. Imports therefore include the movements indicated by arrows 1 and 2, exports the movements indicated by arrows 4 and 5. Direct transit trade (arrow 6) is not included in statistics under either the Special Trade or the General Trade system.

Until recently it appeared to make little difference whether Canadian trade was recorded on one basis or the other. During the period 1952-1961, goods passing through customs warehouses

THE FLOW OF FOREIGN TRADE

fluctuated between 3.1% and 2.4% of all imports, and re-exports from customs warehouses exceeded \$5 million only in 1952, 1953 and 1961. Although from 1955 there was an apparent growth in warehouse stocks each year, the amounts involved were small, exceeding \$10 million only in 1956 and 1959.

This situation changed when surcharges were imposed on most imports in June, 1962, as a temporary exchange conservation measure. Importers who had not previously used customs warehousing facilities began to keep stocks in customs warehouses in the hope that the surcharges would be cancelled before the goods were required. In some cases importers found that this step reduced their costs, since money no longer had to be borrowed to pay import duties in advance of the time that goods were actually required. The result was a sharp increase in the proportion of imports passing through customs warehouses, and increase which continued even after the cancellation of the surcharges in April, 1963. Imports entered into customs warehouses rose from \$143 million in 1961 to \$188 million in 1962 and \$284 million in 1963.

This change began to create statistical problems in the latter part of 1962. There was an increase in discrepancies between Canadian records of trade in certain commodities and the statistics of partner countries. This raised the question as to whether Canada's statistics would be more useful if related to actual goods movements rather than to the technicalities of customs clearance. When it became clear that the trend towards an increased use of customs warehouses was continuing even after the cancellation of the surcharges, it was decided to change the basis on which Canadian trade statistics were compiled.

Over a period of years, the totals of Canadian exports or imports will be almost the same on either the General Trade or Special Trade basis, because of the negligible size of exports ex-warehouse. There can be a significant difference in import totals for individual years because goods which are entered into warehouse in one calendar year may not be cleared until the following year, and warehouse stocks may fluctuate in size with movements in interest rates or in general business activity. There is likely to be a measurable change in the seasonal variation of monthly import totals. It is generally true that more goods are entered into customs warehouses than are cleared from warehouse during the months when the St. Lawrence system is open for navigation, and that more goods are cleared from than entered into warehouse when the St. Lawrence system is closed. The change in the basis of recording import statistics will therefore tend to accentuate the existing seasonal fluctuation of the import totals.

It will not be feasible to adjust detailed statistics of Canadian trade for 1963 and earlier years to the new basis. Totals calculated on both systems are being published in the monthly bulletin Summary of Foreign Trade (D.B.S. Catalogue No. 65-001). Other monthly and quarterly Trade of Canada publications show General Trade (new basis) figures for 1964, but comparative figures for 1963 and earlier years remain on the Special Trade basis on which they were originally compiled.

The following table presents import totals on the old and new bases for the period 1952-1963, and illustrates the main flows involved in this change of systems:

Year	Total Imports		Warehouse Trade				Warehouse Trade as % of Total Imports (3) x 100% (2)
	Special Trade (Old Basis)	General Trade (New Basis)	Imports Entered Into Warehouse	Imports Cleared From Warehouse	Exports Cleared From Warehouse	Apparent Growth in Warehouse Stocks	
	(1)	(2)	(3)	(4)	(5)	(6)	
			millions of dollars				(7) %
1952	3,916	3,920	120	116	13	- 9	3.1
1953	4,248	4,258	122	112	6	+ 4	2.9
1954	3,967	3,970	105	102	5	- 2	2.6
1955	4,568	4,577	113	104	4	+ 5	2.5
1956	5,547	5,565	153	135	5	+13	2.8
1957	5,473	5,488	145	130	5	+10	2.6
1958	5,050	5,059	122	113	4	+ 5	2.4
1959	5,509	5,529	131	111	4	+16	2.4
1960	5,492	5,504	136	124	3	+ 9	2.5
1961	5,769	5,781	143	131	7	+ 5	2.5
1962	6,258	6,295	188	151	10	+27	3.0
1963	6,559	6,579	284	264	10	+10	4.3

SUGGESTIONS FOR USERS OF THIS REPORT

The import statistics in this report are published according to the new Import Commodity Classification and are the first to appear in this form.

Each subscriber to Imports by Commodities - Catalogue No. 65-007 - was recently mailed a copy of the working document: Import Commodity Classification, Volume I - The Classification - Catalogue No. 12-524. The classification, used in conjunction with this report and other import statistics for 1964, should enable most users to locate import statistics of interest to them. It is suggested that users read the introductory notes to the classification, beginning on page 3. Since no index is yet included, users attempting to locate individual commodity statistics should consult the Summary of the Classification beginning on page 7. The summary will guide them to the general area of interest. A summary alphabetic index is being prepared and will be distributed without charge as a supplement to the classification.

The main body of the classification gives the full description of each commodity class in use for recording import statistics as well as a cross reference to the former Statistical Classification - Imports. In published statistics in Imports by Commodities or Imports by Countries, the class readings or descriptions are thirty-five character, or shorter, summaries of the classification description. Users of import statistics should consult the classification for full descriptions and not rely entirely on the abbreviated versions in these reports. Notes appearing on the right hand pages are intended primarily for the use of the staff of the External Trade Division, and point up certain classification difficulties encountered during the period when the new classification was being tested. These notes may, however, be of interest to others.

Since the new classification uses five-digit codes in place of the four-digit codes of the former classification, it is quite evident that all class numbers or codes will change. For about half of the classes of the old classification this will be the only important change; new class descriptions, even where not identical to the old, should not, in themselves, be taken as indicating important changes in content. Some guide to the comparability between old and new may be drawn from the "Former Class" column appearing on the right hand side of the classification pages. Where more than one class is mentioned in this column, it can still often be taken to be, for all practical purposes, a one-for-one conversion between the unstarred old class and new, the starred former class(es) contributing only minor values.

For about half of the remaining classes the comparability between old and new is not as close but no great differences are likely to occur. For the balance of the old classes, it is unlikely that any relationship will exist

between old and new. In the new classification, an attempt has been made to eliminate the large heterogeneous "basket" classes so common to the old classification. The commodities formerly recorded in such classes are allocated, in the new classification, to specific classes or new, smaller n.e.s. (not elsewhere specified) classes.

A more complete convertibility key to the relationship between old and new classes is in preparation. It will be published as a supplement to Trade of Canada reports.

There are three companion working documents to the new Classification which may be of interest to some users; they may be secured from the Publications Distribution Unit of the Dominion Bureau of Statistics:

Import Commodity Classification - Volume II - Numeric Index
Catalogue No. 12-525

A numeric index for Import Commodity Classification, Vol. I. Contains an abbreviated description and an alphabetic list of the principal contents of each commodity class. Approximately 17,000 terms are listed under 2,400 classes. An introduction describing the manual and its use is included. Price of \$5.00 includes a reprint and revision service.

Import Commodity Classification - Volume III - Alphabetic Index
Catalogue No. 12-526

An alphabetic index for Import Commodity Classification, Vol. I. The approximately 17,000 terms of Vol. II are here listed alphabetically with the appropriate commodity class or group number of each. An introduction describing the manual and its use is included. Price of \$5.00 includes a reprint and revision service.

Convertibility Index of Customs Tariff Items to Import Commodity Classification
Catalogue No. 12-527

A working manual listing the items of Schedule A of the Customs Tariff, and indicating the import commodity class(es) in which goods entered under each item are usually included. Designed primarily for persons who must complete customs import entry forms. An introduction describing the manual and its use is included. Price of \$5.00 includes a reprint and revision service.

Changes in Import Commodity Classification

Since publication of the Import Commodity Classification several changes have been necessary. The more important of these are outlined below so that those who wish may make hand changes to the classification. When reprints of these pages are made these changes will be included in the reprinted version.

Table 7. Value, Price and Volume Indexes of Imports by Sections	178

EXPLANATORY NOTES

1. **Source of Data:** Import statistics are compiled from information appearing on customs import entries and invoices, except for data on electricity. Electricity imports are reported directly by the importing firms to the Dominion Bureau of Statistics.
2. **Time Periods:** Import statistics for any month include all goods declared on import entries received at DBS during the calendar month, and on electricity reports received within the following calendar month. Most import entries reach DBS within a few days of the date that goods enter Canada, and delays rarely exceed one week. Electricity imports are usually included in statistics for the month in which these imports actually occurred.
3. **Coverage:** From January 1, 1964, import statistics include all goods which are cleared by Customs immediately on arrival in Canada, plus goods which are entered into customs warehouses rather than being cleared on arrival. For 1963 and earlier years import statistics included goods cleared immediately on arrival plus goods cleared for consumption out of customs warehouses. The two types of record eventually cover the same totals, except for a small amount of goods which is entered into customs warehouse and then re-exported. There may, however, be an important difference in the time at which warehoused goods are recorded as imports; some shipments which enter customs warehouses remain there for several months before clearance. A more detailed discussion of this change appears on one of the blue pages included in the January, 1964 issue of this report.

Both in 1964 and in earlier years, import statistics exclude the following commodity movements (some of these are recorded separately as Special Transactions—Non-Trade in Table 5 of this report): gold and gold products where the value of the gold content is 80% or more of the total value (a small amount of gold scrap in the form of jewellers' sweepings is included in class 258-99); current coin; settlers' effects; private donations and gifts; tourists purchases exempt from duty; goods imported by foreign armed forces or diplomats stationed in Canada (or brought back by Canadian armed forces or diplomats returning from postings outside Canada); temporary imports for exhibition or competition (and film imported for exhibition or processing or returned after exhibition or processing abroad); ships of British construction and registry imported for use in Canada, and ships and aircraft purchased for use as international carriers but not used to carry goods between points in Canada; bunker supplies and ships' stores purchased by Canadian vessels or aircraft abroad; generally, all temporary imports and goods merely moving in transit through Canadian territory.

4. **Countries Credited:** Imports are credited to the country from which the goods were first directed to Canada, except for goods of Central or South American origin consigned to Canada from the United States which are credited to the country of origin.
5. **Quantities:** Tables 4 and 5 show quantities in terms of the units specified for each class in the Import Commodity Classification, Vol. I. Where no unit of quantity is specified, the quantity columns are empty.

Units of weight or volume relate to the weight or volume of the goods, and exclude the weight or volume of any packing required for shipment except in certain special cases otherwise defined in the Customs Tariff. Units of number refer to the number of complete (or substantially complete) units imported, excluding parts (for any class where the recorded value includes both complete units and parts of these units, the average value per complete unit can not be calculated). "Ton" means 2,000 pounds avoirdupois. "Cwt." means 100 pounds avoirdupois.

6. **Values:** The value of goods imported is usually the value as determined for customs duty. The Canadian Customs Act generally requires the valuation of goods f.o.b. point of shipment in the country of export, but at least in recent years importers have often reported c.i.f. value for free goods or goods subject to specific rates of duty. An effort is made to ensure that f.o.b. values are consistently used in import statistics in the following cases: goods subject to dumping duty (from January, 1959); raw cotton and crude petroleum (from January, 1962, retroactive to January, 1961); raw sugar (from January, 1963, retroactive to January, 1961); all shipments individually valued at \$100,000 or more (from January, 1964). Only about one-fifth of the value of imports is covered by these specific checks.
7. **Abbreviations:** Many descriptions of countries and commodities used in this report are abbreviated or incomplete because of mechanical limitations. A key to abbreviations of countries appears in this report, and full descriptions of all commodities appear in the Import Commodity Classification, Vol. I. The letters "n.e.s." mean "not elsewhere specified".
8. **Revisions:** All statistics in this report are subject to revision. Revisions to previous reports are published on coloured pages at the beginning of each monthly report.

KEY TO ABBREVIATIONS OF COUNTRIES

Note: The classification of Countries with a statement of the territorial limits used for statistical purposes will be found in the blue pages of the January, 1960 report. Amendments effective in any year are listed in the January report for that year.

Value, Price and Volume Indexes of Imports

The value, price and volume indexes of imports based on the nine main component material groups according to the old Statistical Classification—Imports are still carried in this report and will continue to be published throughout the current year for the convenience of the users of these data.

This report also marks the start of publication of the value, price and volume indexes of imports arranged according to the sections of the new Import Commodity Classification. The declared value indexes have been based on a grouping of 1948 values into appropriate sections of the new classification. The first six sections of this classification are represented in the index, and Section VII "Special Transactions Non-Trade", which does not enter into the import totals, is excluded. The price index has been based on a re-arrangement of the individual price lines used in calculating the old index, retaining, with some small changes, the original 1948 weighting pattern. The volume index is, as usual, derived by dividing the value index by the corresponding price index. No price or volume index can be compiled for Sections VI "Special Transactions—Trade" because of its non-homogeneity. In addition to presenting the January 1964 data, the re-arranged indexes have been also prepared for 1962 and 1963.

It should be noted that as of January, 1964, imports include both goods which are cleared by Customs immediately on arrival in Canada and also goods entered into customs warehouses without being cleared for domestic use. This new concept has also been introduced in the value, price and volume indexes but the effect on the indexes is considered of minor significance.

For an explanation of the new basis of compiling trade statistics, refer to the blue insert in the January, 1964, issue of this report.

EXPLANATORY NOTES

1. **Source of Data:** Import statistics are compiled from information appearing on customs import entries and invoices, except for data on electricity. Electricity imports are reported directly by the importing firms to the Dominion Bureau of Statistics.
2. **Time Periods:** Import statistics for any month include all goods declared on import entries received at DBS during the calendar month, and on electricity reports received within the following calendar month. Most import entries reach DBS within a few days of the date that goods enter Canada, and delays rarely exceed one week. Electricity imports are usually included in statistics for the month in which these imports actually occurred.
3. **Coverage:** From January 1, 1964, import statistics include all goods which are cleared by Customs immediately on arrival in Canada, plus goods which are entered into customs warehouses rather than being cleared on arrival. For 1963 and earlier years import statistics included goods cleared immediately on arrival plus goods cleared for consumption out of customs warehouses. The two types of record eventually cover the same totals, except for a small amount of goods which is entered into customs warehouse and then re-exported. There may, however, be an important difference in the time at which warehoused goods are recorded as imports; some shipments which enter customs warehouses remain there for several months before clearance. A more detailed discussion of this change appears on one of the blue pages included in the January, 1964 issue of this report.

Both in 1964 and in earlier years, import statistics exclude the following commodity movements (some of these are recorded separately as Special Transactions—Non-Trade in Table 5 of this report): gold and gold products where the value of the gold content is 80% or more of the total value (a small amount of gold scrap in the form of jewellers' sweepings is included in class 258-99); current coin; settlers' effects; private donations and gifts; tourists purchases exempt from duty; goods imported by foreign armed forces or diplomats stationed in Canada (or brought back by Canadian armed forces or diplomats returning from postings outside Canada); temporary imports for exhibition or competition (and film imported for exhibition or processing or returned after exhibition or processing abroad); ships of British construction and registry imported for use in Canada, and ships and aircraft purchased for use as international carriers but not used to carry goods between points in Canada; bunker supplies and ships' stores purchased by Canadian vessels or aircraft abroad; generally, all temporary imports and goods merely moving in transit through Canadian territory.

4. **Countries Credited:** Imports are credited to the country from which the goods were first directed to Canada, except for goods of Central or South American origin consigned to Canada from the United States which are credited to the country of origin.
5. **Quantities:** Tables 4 and 5 show quantities in terms of the units specified for each class in the Import Commodity Classification, Vol. I. Where no unit of quantity is specified, the quantity columns are empty.

Units of weight or volume relate to the weight or volume of the goods, and exclude the weight or volume of any packing required for shipment except in certain special cases otherwise defined in the Customs Tariff. Units of number refer to the number of complete (or substantially complete) units imported, excluding parts (for any class where the recorded value includes both complete units and parts of these units, the average value per complete unit can not be calculated). "Ton" means 2,000 pounds avoirdupois. "Cwt." means 100 pounds avoirdupois.

6. **Values:** The value of goods imported is usually the value as determined for customs duty. The Canadian Customs Act generally requires the valuation of goods f.o.b. point of shipment in the country of export, but at least in recent years importers have often reported c.i.f. value for free goods or goods subject to specific rates of duty. An effort is made to ensure that f.o.b. values are consistently used in import statistics in the following cases: goods subject to dumping duty (from January, 1959); raw cotton and crude petroleum (from January, 1962, retroactive to January, 1961); raw sugar (from January, 1963, retroactive to January, 1961); all shipments individually valued at \$100,000 or more (from January, 1964). Only about one-fifth of the value of imports is covered by these specific checks.
7. **Abbreviations:** Many descriptions of countries and commodities used in this report are abbreviated or incomplete because of mechanical limitations. A key to abbreviations of countries appears in this report, and full descriptions of all commodities appear in the Import Commodity Classification, Vol. I. The letters "n.e.s." mean "not elsewhere specified".
8. **Revisions:** All statistics in this report are subject to revision. Revisions to previous reports are published on coloured pages at the beginning of each monthly report.

KEY TO ABBREVIATIONS OF COUNTRIES

Note: The classification of Countries with a statement of the territorial limits used for statistical purposes will be found in the blue pages of the January, 1960 report. Amendments effective in any year are listed in the January report for that year.

Value, Price and Volume Indexes of Imports

The value, price and volume indexes of imports based on the nine main component material groups according to the old Statistical Classification—Imports are still carried in this report and will continue to be published throughout the current year for the convenience of the users of these data.

This report also marks the start of publication of the value, price and volume indexes of imports arranged according to the sections of the new Import Commodity Classification. The declared value indexes have been based on a grouping of 1948 values into appropriate sections of the new classification. The first six sections of this classification are represented in the index, and Section VII "Special Transactions Non-Trade", which does not enter into the import totals, is excluded. The price index has been based on a re-arrangement of the individual price lines used in calculating the old index, retaining, with some small changes, the original 1948 weighting pattern. The volume index is, as usual, derived by dividing the value index by the corresponding price index. No price or volume index can be compiled for Sections VI "Special Transactions—Trade" because of its non-homogeneity. In addition to presenting the January 1964 data, the re-arranged indexes have been also prepared for 1962 and 1963.

It should be noted that as of January, 1964, imports include both goods which are cleared by Customs immediately on arrival in Canada and also goods entered into customs warehouses without being cleared for domestic use. This new concept has also been introduced in the value, price and volume indexes but the effect on the indexes is considered of minor significance.

For an explanation of the new basis of compiling trade statistics, refer to the blue insert in the January, 1964, issue of this report.

Table 7. Value, Price and Volume Indexes of Imports by Sections	

EXPLANATORY NOTES

1. **Source of Data:** Import statistics are compiled from information appearing on customs import entries and invoices, except for data on electricity. Electricity imports are reported directly by the importing firms to the Dominion Bureau of Statistics.
2. **Time Periods:** Import statistics for any month include all goods declared on import entries received at DBS during the calendar month, and on electricity reports received within the following calendar month. Most import entries reach DBS within a few days of the date that goods enter Canada, and delays rarely exceed one week. Electricity imports are usually included in statistics for the month in which these imports actually occurred.

3. **Coverage:** From January 1, 1964, import statistics include all goods which are cleared by Customs immediately on arrival in Canada, plus goods which are entered into customs warehouses rather than being cleared on arrival. For 1963 and earlier years import statistics included goods cleared immediately on arrival plus goods cleared for consumption out of customs warehouses. The two types of record eventually cover the same totals, except for a small amount of goods which is entered into customs warehouse and then re-exported. There may, however, be an important difference in the time at which warehoused goods are recorded as imports; some shipments which enter customs warehouses remain there for several months before clearance. A more detailed discussion of this change appears on one of the blue pages included in the January, 1964 issue of this report.

Both in 1964 and in earlier years, import statistics exclude the following commodity movements (some of these are recorded separately as Special Transactions—Non-Trade in Table 5 of this report): gold and gold products where the value of the gold content is 80% or more of the total value (a small amount of gold scrap in the form of jewellers' sweepings is included in class 258-99); current coin; settlers' effects; private donations and gifts; tourists purchases exempt from duty; goods imported by foreign armed forces or diplomats stationed in Canada (or brought back by Canadian armed forces or diplomats returning from postings outside Canada); temporary imports for exhibition or competition (and film imported for exhibition or processing or returned after exhibition or processing abroad); ships of British construction and registry imported for use in Canada, and ships and aircraft purchased for use as international carriers but not used to carry goods between points in Canada; bunker supplies and ships' stores purchased by Canadian vessels or aircraft abroad; generally, all temporary imports and goods merely moving in transit through Canadian territory.

4. **Countries Credited:** Imports are credited to the country from which the goods were first directed to Canada, except for goods of Central or South American origin consigned to Canada from the United States which are credited to the country of origin.
5. **Quantities:** Tables 4 and 5 show quantities in terms of the units specified for each class in the Import Commodity Classification, Vol. I. Where no unit of quantity is specified, the quantity columns are empty.

Units of weight or volume relate to the weight or volume of the goods, and exclude the weight or volume of any packing required for shipment except in certain special cases otherwise defined in the Customs Tariff. Units of number refer to the number of complete (or substantially complete) units imported, excluding parts (for any class where the recorded value includes both complete units and parts of these units, the average value per complete unit can not be calculated). "Ton" means 2,000 pounds avoirdupois, "Cwt." means 100 pounds avoirdupois.

6. **Values:** The value of goods imported is usually the value as determined for customs duty. The Canadian Customs Act generally requires the valuation of goods f.o.b. point of shipment in the country of export, but at least in recent years importers have often reported c.i.f. value for free goods or goods subject to specific rates of duty. An effort is made to ensure that f.o.b. values are consistently used in import statistics in the following cases: goods subject to dumping duty (from January, 1959); raw cotton and crude petroleum (from January, 1962, retroactive to January, 1961); raw sugar (from January, 1963, retroactive to January, 1961); all shipments individually valued at \$100,000 or more (from January, 1964). Only about one-fifth of the value of imports is covered by these specific checks.

7. **Abbreviations:** Many descriptions of countries and commodities used in this report are abbreviated or incomplete because of mechanical limitations. A key to abbreviations of countries appears in this report, and full descriptions of all commodities appear in the Import Commodity Classification, Vol. I. The letters "n.e.s." mean "not elsewhere specified".

8. **Revisions:** All statistics in this report are subject to revision. Revisions to previous reports are published on coloured pages at the beginning of each monthly report.

KEY TO ABBREVIATIONS OF COUNTRIES

Note: The classification of Countries with a statement of the territorial limits used for statistical purposes will be found in the blue pages of the January, 1960 report. Amendments effective in any year are listed in the January report for that year.

Value, Price and Volume Indexes of Imports

The value, price and volume indexes of imports based on the nine main component material groups according to the old Statistical Classification—Imports are still carried in this report and will continue to be published throughout the current year for the convenience of the users of these data.

This report also marks the start of publication of the value, price and volume indexes of imports arranged according to the sections of the new Import Commodity Classification. The declared value indexes have been based on a grouping of 1948 values into appropriate sections of the new classification. The first six sections of this classification are represented in the index, and Section VII "Special Transactions Non-Trade", which does not enter into the import totals, is excluded. The price index has been based on a re-arrangement of the individual price lines used in calculating the old index, retaining, with some small changes, the original 1948 weighting pattern. The volume index is, as usual, derived by dividing the value index by the corresponding price index. No price or volume index can be compiled for Sections VI "Special Transactions—Trade" because of its non-homogeneity. In addition to presenting the January 1964 data, the re-arranged indexes have been also prepared for 1962 and 1963.

It should be noted that as of January, 1964, imports include both goods which are cleared by Customs immediately on arrival in Canada and also goods entered into customs warehouses without being cleared for domestic use. This new concept has also been introduced in the value, price and volume indexes but the effect on the indexes is considered of minor significance.

For an explanation of the new basis of compiling trade statistics, refer to the blue insert in the January, 1964, issue of this report.
